On matters of the department syllabus modifications:

The Chairperson thanked all the members for their support in the matter related to the syllabus modifications and introduction of new courses in 2020. The DAC unanimously agreed that the modifications done in the syllabus will open new research directions, training and potential job opportunities for the students.

The syllabus now has separate project component and all the PG students get equal opportunity to opt from the specialized field of research, offered by the department to undertake their project following departmental guidelines and is delinked from the special paper. This has ensured that all faculties can guide students in more than 12 sub-disciplines of lifesciences. Incorporation of new course on “Environmental Monitoring and Assessment” will prepare our students to take up jobs in agencies related to Environment and Climate change biomonitoring and assessment.

The special paper will have an integrated practical directly linked to the theoretical aspects now, thus benefiting the stakeholders. Similarly, the PhD syllabus was overhauled to incorporate UGC guidelines and specialized disciplines offered by the department keeping in mind the new developments in specific field of research, ethics in research, project and paper writings, Plagiarism,

IPR, etc. These modifications certainly will prepare our students for better understanding of subject and preparing to take up challenges in research and development.
